## Task 4: Integer to String Concatenation

### Question:

Write a program that converts an integer to a string and concatenates it with another string.

### Input Format:

- A single line of input containing an integer.

### Output Format:

- A concatenated string that includes the converted integer.

### Example:

#### Input:

42

#### Output:

The answer is 42

### Explanation:

- The input 42 is converted to a string and concatenated with "The answer is " to produce "The answer is 42".
