Input Functions

Task 1: Favorite Color

Question:

Write a program that uses the input function to get a user's favorite color and prints a message with that color.

Input Format:

- A single line of input containing the user's favorite color.

Output Format:

- A message that includes the user's favorite color.

Example:

Input:

blue

Output:

Your favorite color is blue.

Explanation:

- The input blue is stored in a variable and then used in a print statement to generate the output message.
